PROFICIENCY TESTING

PROVEN PERFORMANCE

We operate the world's largest A2LA-accredited corrosion test lab — and we are the industry's only ISO/IEC 17043 accredited proficiency testing provider focused exclusively on corrosion.

HOW IT WORKS

- ✓ Register – Select your program(s) and receive coupons + instructions.
- ✓ Test – Run the exposure in your own chamber following the official procedure.
- ✓ Report – Record weights, mass loss, and chamber conditions on our supplied forms.
- ✓ Compare – Return coupons and data to ATC. We compile results and issue a coded report.
- ✓ Validate – Receive your confidential results and compare performance against peers. Reports are issued twice per year (June and December). Outliers are included for transparency but not used in statistical mean/SD calculations.

WHAT WE OFFER

Auto Technology's PT programs cover the world's most widely used corrosion test standards: ASTM B117, ASTM B368, GMW 14872, SAE J2334, Ford CETP 00.00-L-467. Each program is designed and managed by corrosion experts.

WHY IT'S VALUABLE

- ✓ Stay Accredited – ISO 17025 accredited labs are required to participate in PT.
- ✓ Benchmark Results – Compare your outcomes against global peers, using statistical consensus values.
- ✓ Audit Readiness – Our reports satisfy assessor requirements for ongoing proficiency testing.
- ✓ Expert Oversight – Your testing is evaluated by recognized industry leaders.
- ✓ Trusted Methods – Programs are built directly from the official test procedures (ASTM, SAE, GMW, Ford).
